Programming with infinite lists open up a new way of writing programs, where you give rules for generating a sequence rather than building it by hand — often leading to simpler code. Since data types are lazy and support self references, you can produce a list dynamically by defining it as a function of its successors. The simplest example of this is the sequence of natural numbers (i.e. \{1,2,3,4,\ldots\}) — there are a few different ways of doing this in Haskell:

\[
\text{numbers1} = 1 : \text{map } (+1) \text{ numbers1}
\]
\[
\text{numbers2} = 1 : [x+1 | x \text{ take 10 numbers1} [1,2,3,4,5,6,7,8,9,10] ]
\]

*Maint> take 10 numbers1 [1,2,3,4,5,6,7,8,9,10]  
*Maint> take 10 numbers2 [1,2,3,4,5,6,7,8,9,10]

*a splendidly illustrated monograph, The Infinity of Lists: An Illustrated Essay (Rizzoli)*... is, in essence, a tour through art, literature, and music based on the theme of lists, an investigation of the phenomenon of cataloging and collecting. Additionally, Eco maintains that the impulse to accumulate, to collect, is a recurring passion in Western culture.*  

The chief theme is the attempt by authors and artists to express comprehensiveness, incomprehensibility, and even infinity with lists (whether verbal or artistic). Sometimes the book drags, and sometimes the extracts are just too long. Or boring.
The Infinity of Lists is a book by Umberto Eco on the topic of lists (2009) ISBN 978-0847832965. The title of the original Italian edition was La Vertigine della Lista (The Vertigo of Lists) (2009) ISBN 978-8845263453. It was produced in collaboration with the Louvre.[1]. The examples of lists in the work range from Hesiod's list of the progeny of gods to Rabelais' list of bottom wipes.[1]. Reception. [1]. See also. The Book of Lists. List of lists of lists. No In The Infinity of Lists Umberto Eco sings the praises of Homer's "Catalogue" and of a vast range of other lists in western culture. (He hardly draws on the east, beyond referring to the numbered list of a Chinese restaurant menu.) At the very beginning of European literature, Eco argues, Homer offered us two ways of seeing the world. On the one hand, there is that open-ended list of military forces, with all its indeterminacy and hints at infinity. On the other, later in the Iliad, there is a description of the magnificent shield, which the god Hephaestus made for Achilles, wit The Infinity of Lists. seraphnb Aug 26th, 2012 10,044 Never.
